

Logins aur URLs — OyeBazar

Kaun kahan se andar aata hai, us ke paas kitna ikhtiyar hai, aur test ke liye kaun sa number chalta hai.

Production par `http://localhost:3000` ki jagah `https://oyebazar.com` lagayen — baqi sab wohi rehta hai.

Sab se pehle: koi password hai hi nahi

Har login WhatsApp OTP se hota hai — number daalen, 6 hindson ka code aata hai, andar.

"Credential" ka matlab is nizam mein sirf ek cheez hai: **WhatsApp number**. Wajah: phone kisi aur ke haath lag jaye to session ek click mein khatam ki ja sakti hai. Password ke saath ye mumkin nahi — wo badalna parta hai, aur us ke saath wo har jagah badalna parta hai jahan banday ne wohi password rakha hua ho.

1. Saare logins — ek hi jadwal

Ye khaate `prisma/seed-accounts.ts` banata hai, aur wo **dev aur production DONO** par chalta hai (neeche §1.4 dekhien). Number DB mein E.164 mein rakha jata hai (`923004445566`), magar login par `03004445566` likhna kaafi hai — dono ek hi cheez hain.

1.1 Dukanein — 15, `/supplier/login`

Number ek qaide se banta hai: `03001000001` se `03001000015` — tarteeb wohi jo `seed-accounts.ts` ke `SUPPLIERS` mein hai.

#	Dukan	Login number	Sheher
1	فیصل فیرکس	03001000001	Faisalabad
2	شہزاد کلاتھ ہاؤس	03001000002	Lahore
3	الکرم ٹیکسٹائل	03001000003	Karachi
4	مدینہ سوٹ سینٹر	03001000004	Lahore
5	گجرانوالہ اسٹیل ہاؤس	03001000005	Gujranwala
6	ملتان ڈرائی فروٹ	03001000006	Multan
7	سیالکوٹ اسپورٹس	03001000007	Sialkot
8	پشاور کراکری ہاؤس	03001000008	Peshawar
9	کریسنٹ کاسمیٹکس	03001000009	Karachi
10	میٹرو ہوم سپلائز	03001000010	Rawalpindi
11	نور جیولری	03001000011	Lahore
12	اقبال الیکٹرانکس	03001000012	Karachi
13	چناب لان	03001000013	Faisalabad
14	راوی کچن اسٹور	03001000014	Lahore
15	سوات ہینڈی کرافٹس	03001000015	Mingora

1.2 Resellers — 12, /login

03002000001 se 03002000012 .

#	Naam	Login number	Sheher
1	صادیہ	03002000001	Rawalpindi
2	حرا	03002000002	Lahore
3	عائشہ	03002000003	Karachi
4	مریم	03002000004	Lahore
5	فاطمہ	03002000005	Karachi
6	زینب	03002000006	Faisalabad
7	ایمان	03002000007	Islamabad
8	رابعہ	03002000008	Multan
9	خدیجہ	03002000009	Peshawar
10	ثنا	03002000010	Gujranwala
11	امینہ	03002000011	Sialkot
12	نورین	03002000012	Quetta

Reseller ke liye ye fehris hadd nahi hai. /login par KOI bhi naya number daalen — naam aur sheher poochh kar khaata khud ban jata hai. Jitne chahiye, utne.

1.3 Ops team — 5, /admin/login

Har darje ka apna khaata, kyunke ikhtiyar ki rok ek hi khaate se ****test hi nahi ho sakti****: REVIEWER dekh sakta hai magar badal nahi sakta, COORDINATOR order aage barha sakta hai magar fee ko haath nahi laga sakta.

Naam	Login number	Darja	Kya kar sakta hai
Ghulam Rasool	03004445566	SUPER_ADMIN	Sab kuch — fee rate, invoice, team
Ops Manager	03004445567	MANAGER	Dukanein aur maal manzoor karna, payouts
Ops Coordinator	03004445568	COORDINATOR	Order aage barhana
Ops Coordinator 2	03004445569	COORDINATOR	Wohi — do bandon ka moqabla dekhne ko
Auditor Sahib	03004445570	REVIEWER	Sirf dekhna, badalna kuch nahi

Is se ziyada chahiye to script se:

```
pnpm db:ops-user -- --name "Naya Banda" --email a@oyebazar.com --phone 03004445571 --role COORDINATOR
```

1.4 Ye khaate banaye kaise jate hain

```
pnpm --filter @oyebazar/db exec tsx prisma/seed-accounts.ts
```

● **Ye script idempotent hai** — jo khaata pehle se ho usay chhoo kar nahi guzarta (`findUnique` → `continue`). Is liye isay production par dobara chalana MEHFOOZ hai: nayi entries jurh jati hain, purane khaate aur un ka data waisa ka waisa rehta hai.

Production par chalane ke liye `DATABASE_URL` chahiye — dekhien `docs/DEPLOY.md` .

1.5 OTP kahan milta hai

Dev par do jagah, dono se kaam chal jata hai:

1. **Safhe par hi** — login screen par ek kaale dabbe mein code likha aata hai aur khana pehle se bhara hota hai.

2. **Terminal mein** — dev server ke log mein `whatsapp_template_dev` wali line.

● Ye asli code production mein kabhi nahi aata. Do taale lage hain: `NODE_ENV` , aur messaging provider — dekhien `apps/web/__tests__/security/dev-otp.test.ts` .

Production par abhi `STATIC_OTP` naam ka ek Fly secret laga hua hai — yani har OTP wohi ek code hai. Wo qadar yahan JAAN BOOJH KAR nahi likhi. Team ke paas hai; `flyctl secrets list -a oyebazar-web` us ka hona to batata hai, qadar nahi.

● 1.6 Ek khula hua khatra — parh kar aage barhen

Ye teen baatein ALAG ALAG bilkul theek hain, magar **saath mein** ek poora darwaza banati hain:

1. Har dukan ka WhatsApp number `/bazaar` par **bina login** chhapta hai — directory ki poori qeemat wohi hai, ye design hai.
2. Seed mein dukan ka `phone` (jis se LOGIN hota hai) aur `whatsappPublic` (jo chhapta hai) **ek hi qadar** hain.
3. `STATIC_OTP` laga hone ka matlab hai ke har number par wohi ek code chalta hai.

Yani koi bhi shakhs `/bazaar` khole, kisi dukan ka number parhe, `/supplier/login` par daale, wo code likhe — aur us dukan ke portal mein hai: order, customer ke pate, payout. **Koi andaruni maloomat darkar nahi.**

Hal do qadam hai, aur **isi tarteeb mein**:

1. `WHATSAPP_PROVIDER` set ho (WATI ka URL + key), taake asli OTP waqai pohanche
2. **Us ke baad** `STATIC_OTP` hataya jaye

● Tarteeb ulti karna khud ko bahar kar dena hai: provider ke baghair `STATIC_OTP` hatate hi kisi ko koi code nahi milega — team ko bhi nahi.

Us ke baad ye teen baatein bhi mil kar bhi bay-zarar ho jati hain, kyunke code phir sirf us number par pohanchta hai jo waqai us dukan ka hai.

2. Saare raaste — ek jagah

Bina login (koi bhi khol sakta hai)

Safha	Raasta
Home	/
Bazaar — dukanon ki directory	/bazaar
Ek dukan ka safha	/bazaar/<slug> — misal /bazaar/al-madina-fabrics
Nayi dukan ki darkhwast	/supplier/join
Order ka magic link (WhatsApp se)	/supplier/o/<token>

● Bazaar par koi rate nahi aur koi order button nahi — ye qanooni faisla hai, dekhen \$2.

Reseller

Safha	Raasta
Login / naya account	/login
Dashboard	/dashboard
Catalogue	/catalogue
Maal ka safha + Content Studio	/catalogue/<productId>
Naya order	/orders/new/<productId>
Apne order	/orders

Wholesaler

Safha	Raasta
Login	/supplier/login
Aaye hue order	/supplier/orders
Apna maal — stock, tasveerein, rate	/supplier/stock

Ops / Admin

Safha	Raasta	Kam se kam darja
Login	<code>/admin/login</code>	—
Dashboard	<code>/admin</code>	REVIEWER
Orders	<code>/admin/orders</code>	REVIEWER
Wholesalers	<code>/admin/suppliers</code>	REVIEWER
Products + rate ki darkwasten	<code>/admin/products</code>	REVIEWER (faisla: MANAGER)
Resellers	<code>/admin/resellers</code>	REVIEWER
Money — fee, invoice	<code>/admin/money</code>	REVIEWER (invoice: SUPER_ADMIN)
Team	<code>/admin/team</code>	SUPER_ADMIN

Dekhna aur karna alag cheezen hain: REVIEWER har safha khol sakta hai magar wahan ka koi button nahi chalta (rok service mein hai, UI par nahi — §3).

3. Reseller — us ka portal

Login	<code>/login</code>
Naya account	wohi safha — number naya ho to naam aur sheher poochh kar foran ban jata hai
Login ke baad	<code>/dashboard</code>
Cookie	<code>oyebazar_session</code> · 7 din

Reseller ka account **khud-ba-khud chalu** ho jata hai. Bachao aage hai: order us ki apni tasdeeq ke baghair wholesaler tak jata hi nahi.

Andar kya hai: dashboard (kamai, ruke hue order), catalogue + Content Studio (status pack), orders, bazaar.

Maal par ek se zyada tasveerein hon to Content Studio mein "کون سی تصویر؟" wali patti aati hai — har tasveer ka apna pack banta hai aur apna cache rakhta hai. Ek hi tasveer ho to ye patti nahi aati (3-tap ka usool).

4. Wholesaler — dukan ka portal

Login	/supplier/login
Nayi dukan ki darkhwast	/supplier/join
Login ke baad	/supplier/orders
Cookie	oyebazar_supplier · 7 din

Login **sirf VERIFIED dukan** kar sakti hai. Darkhwast bhejne se dukan live nahi hoti — wo **PENDING** banti hai aur ops team admin portal se manzoori deti hai ya rabta kar ke baqi tafseel mukammal karti hai.

Andar kya hai: aaye hue order (qubool/mana), aur apna maal — stock on/off, aur har maal ki tasveerein aur video.

Rate badalna — do alag raaste

Maal ki halat	Kaun badal sakta hai
DRAFT (abhi manzoor nahi hua)	wholesaler khud — naam, rate, category, ginti, sab
LIVE	sirf ops ki manzoori se — wholesaler darkhwast bhejta hai

● LIVE par ye rok kaarobari hai, technical nahi. Reseller apna retail rate save kar chuki hoti hai aur us ka status pack pehle se WhatsApp par laga hua hota hai. Rate barhte hi **bajiPrice** barhta hai — aur ab wo pack us rate ka elaan kar raha hota hai jo us ki apni lagat se KAM hai. Usay pata tab chalta hai jab customer haan keh chuka hota hai aur order fail hota hai. Itla ye nuqsan nahi rokti, sirf khabar deti hai.

Manzoori dete waqt ops ko **/admin/products** par saaf dikhta hai ke ****kitni resellers ka saved rate naye cost se neeche hai**** — wohi log jin ka pehle se laga hua pack loss par bik raha hoga. Manzoori usi lamhe un ka rate bhi theek kar deti hai (naye **suggestedRetail** par), warna un ka agla status pack apni lagat se kam ka rate chhap kar chala jata.

Ikhtiyar: **MANAGER** (**approvePriceChange**). Fee ***rate*** alag cheez hai aur wo SUPER_ADMIN par hi rehta hai.

⚠ Jin resellers ka rate badla gaya, unhen WhatsApp par khabar bhejna abhi baqi hai — wo worker ke paced job ka kaam hai (GOLDEN RULE #10: ek web request se sau paighaam nahi ja sakte).

Tasveerein aur video

Naya maal daalte waqt seedha phone se chuni jati hain, aur baad mein **/supplier/stock** par har maal ke neeche "تصویریں" khol kar aur lagai ya hatai ja sakti hain.

Qismein	JPG · PNG · WEBP · MP4 · MOV · WEBM
Hadd	tasveer 8 MB · video 50 MB · ek maal par 8 cheezein
Sarwarq	koi ek TASVEER — reseller ke Content Studio mein yehi pehle se chuni aati hai

● File ki qism us ke pehle bytes se pehchani jati hai, browser ke bataye hue `Content-Type` se nahi. Dev mein upload `apps/web/public/_dev-media` mein girti hai jahan se Next usay HAMARE apne origin se serve karta hai — wahan ek "image/jpeg" jo asal mein HTML hai, us safhe par script chala kar reseller ki session cookie tak pohanch sakti thi. Test: `packages/storage/src/sniff.test.ts`.

● Video par status pack nahi banta (Playwright HTML screenshot se render hota hai). Video sirf gallery mein chalta hai.

Magic link — bina login

Jab order us ke paas jata hai, WhatsApp par link jata hai:

```
/supplier/o/<token>
```

Ye link **sirf wohi ek order** kholta hai aur login nahi maangta — dukan par jaldi mein yehi kaam ka hai. Token 32 bytes ka hai, ek hi order par chalta hai, aur us safhe par reseller ka retail rate kabhi nahi dikhta (sirf wholesaler ki apni raqam).

5. Admin — ops ka portal

Login	<code>/admin/login</code>
Login ke baad	<code>/admin</code>
Cookie	<code>oyebazar_admin</code> · 24 ghante (baqi 7 din)

Session chhoti hai kyunke is portal se poora karobar chalta hai.

Chaar darjay

Barhte hue — upar wale ke paas neech walon ka sab kuch hota hai.

Role	Kis ke liye	Kya kar sakta hai
REVIEWER	Auditor, investor, naya banda	Sab kuch dekhna — order, maal, resellers, paisa. Badalna kuch nahi.
COORDINATOR	Rozana chalane wala	Us ke ilawa: order aage barhana (wholesaler ko bhejna, dispatched/delivered/RTO)
MANAGER	Team lead	Us ke ilawa: dukan verify/list/band, maal LIVE/archive, reseller band, invoice "paid"
SUPER_ADMIN	Malik	Us ke ilawa: fee rate , invoice banana , aur team (naye user, role, access)

Fee rate aur invoice SUPER_ADMIN tak mehdood hain kyunke dono seedha kamai ka faisla hain: ek ghalat click se supplier hamesha ke liye 0% par chala jata hai, aur invoice banate hi ledger ki rows `PENDING` se `INVOICED` ho jati hain aur wapas nahi hoti.

Naya user by default **REVIEWER** banta hai — sab se kam ikhtiyar. Barhana aasan hai; "pehle sab kuch de do, baad mein kam kar denge" kabhi yaad nahi rehta.

● Roles aur har ikhtiyar ek hi file mein likhe hain: `packages/core/src/domain/ops-permissions.ts`. Service wahin se rokta hai aur Team ka safha wahin se jadwal banata hai — do jagah likhne ka anjaam yehi hota hai ke UI kuch aur kehti hai aur server kuch aur karta hai.

● Ye rok **service mein** hai, UI par nahi — button chhupana kaafi nahi hota, koi bhi seedha API call kar sakta hai.

Screens

`/admin` dashboard · `/admin/orders` · `/admin/suppliers` · `/admin/products` · `/admin/resellers` · `/admin/money` · `/admin/team`

● Pehla super admin — nayi (production) database par

Nayi DB par koi ops user hota hi nahi: `/admin/login` par koi andar nahi ja sakta, aur Team ka safha bhi kaam nahi aata kyunke wo pehle se mojud SUPER_ADMIN maangta hai. Pehla darwaza CLI se khulta hai:

```
pnpm db:ops-user -- --name "Ghulam Rasool" --email me@oyebazar.com --phone 03004445566
```

Fly.io par:

```
fly ssh console -C "pnpm db:ops-user -- --name 'Naam' --email a@oyebazar.com --phone 03001234567"
```

Role na den to `SUPER_ADMIN` banta hai. Number pehle se mojud ho to CLI kuch nahi badalti — sirf batati hai (chup chaap kisi ka access badalna sab se bura anjaam hai).

Is ke baad ki saari team `/admin/team` se banti hai.

Naya ops user kaise bane

`/admin/team` se — sirf SUPER_ADMIN. Naam, email, WhatsApp number aur role daal den; login usi number se hoga (koi password nahi). Usi safhe par role badalna aur access band/chalu karna bhi hai, aur ek jadwal jo batati hai ke har role kya kar sakta hai.

Kisi ke jane par **Disable** — us ki saari sessions usi waqt khatam ho jati hain, agle din tak khula hua browser nahi chalta.

● Do cheezen jaan boojh kar roki gayi hain: **apna role khud badalna** aur ****khud ko band karna****. Wajah amli hai — aakhri SUPER_ADMIN khud ko gira de to fee rate aur invoice ka darwaza hamesha ke liye band ho jata hai, aur koi bacha hi nahi jo usay wapas khole.

6. Teen alag cookies — kyun

`oyebazar_session` (reseller) · `oyebazar_supplier` (wholesaler) · `oyebazar_admin` (ops)

Ek hi naam hota to ek login doosre ko gira deta. Ye rozana hota: dukan par ek hi computer se beta reseller ka kaam bhi karta hai, aur ops ka banda support ke liye reseller ka account bhi khol kar dekhta hai.

Hifazat sirf naam par nahi hai — har session par likha hota hai ke wo **kis** ki hai (`resellerId` / `supplierId` / `opsUserId`). Reseller ka asli token admin cookie mein chipka dein to bhi andar nahi jaya ja sakta; jaancha gaya hai.

7. Secrets kahan hain

● Is document mein koi asli password ya key nahi hai, aur nahi honi chahiye. Yahan sirf ye likha hai ke kaunsi cheez kahan rakhi jati hai.

Local machine	<code>.env</code> (git se bahar — <code>.gitignore</code> mein hai)
Naya developer	<code>.env.example</code> copy kar ke <code>.env</code> banaye
Production (Fly.io)	<code>fly secrets set KEY=value</code> — kabhi repo mein nahi

Kya kya set hota hai:

Key	Kis liye
<code>DATABASE_URL</code> / <code>DIRECT_URL</code>	Postgres (Neon ya local)
<code>APP_URL</code>	Magic link isi se banta hai — production par <code>https://oyebazar.com</code>
<code>WHATSAPP_PROVIDER</code>	<code>console</code> (dev) ya <code>wati</code> (asli)
<code>WATI_API_URL</code> / <code>WATI_API_KEY</code>	WhatsApp bhejne ke liye — OTP aur order ke paighaam
<code>SUPABASE_URL</code> / <code>SUPABASE_SERVICE_KEY</code> / <code>SUPABASE_BUCKET</code>	Status pack ki tasveerein
<code>REDIS_URL</code>	Render queue (na ho to dev mein sirf log)
<code>OPS_API_KEY</code>	Purane <code>/api/v1/ops/*</code> endpoints — naya admin portal is se nahi chalta
<code>DEFAULT_FEE_RATE_BPS</code>	Nayi dukan ka default fee rate (500 = 5%)
<code>RENDER_CONCURRENCY</code>	Worker ek waqt mein kitne pack banaye

`NODE_ENV` yahan **set na karen** — Next/Node khud karte hain. `.env` mein reh jaye to production build tootti hai aur session cookie `secure` nahi rehti.

8. Local par sab kuch chalane ke liye

Teen cheezen, teen terminal:

```
pnpm db:local      # Postgres (embedded, port 5433)
pnpm dev           # website — http://localhost:3000
pnpm --filter @oyebazar/worker render:watch # status pack banata hai
```

Pehli dafa:

```
pnpm install
pnpm db:migrate:deploy
pnpm db:seed
```

Seed ke baad upar wale (§4) saare test accounts kaam karne lag jate hain.
